📍 Brisbane

A self-taught developer with ASD, seeking an internship / occupation in the **Brisbane** region. I'm currently traversing the perpetual rabbit hole that is **Computer Science** and all its many fields. Always seeking additional knowledge of that which interests me and that which could prove beneficial to your business. I am especially interested in the field of **Cyber Security** with a passion for **pentesting** servers in a homelab environment & CTF challenges. — I am presently a student studying the **compTIA** family of exams so I can explore this field I'm so very passionate about. The **Network+** is the next certification on my horizon followed by the **Security+**.
